

Research Directions for the Diabetes CCRE

Do you work with people with diabetes?

Then we would like to speak to YOU!

The NHMRC Centre of Clinical Research Excellence in Clinical Science in Diabetes (Diabetes CCRE) is a clinical research centre at the University of Melbourne funded by the Australian government and involved in research into various aspects of type 1 and type 2 diabetes:

- *Diabetes management in general practice and primary care*
- *Complications including diabetic retinopathy, renal disease, cardiovascular disease*
- *Insulin pump technologies and continuous glucose monitoring*
- *Diet, nutrition and diabetes*
- *Population studies of diabetes*
- *Islet cell transplantation and associated issues*

The Diabetes CCRE will be holding information sessions about our work to inform people who work with people with diabetes, in health care and support. We will then hold a focus group discussion when you will have the opportunity to give us your views about important diabetes research priorities.

The session will be held from 5.00pm to 7.00pm
on Friday November 20, 2009 at:

Western District Health Service Education Centre
Kitchener Street, Hamilton (Car park on Kitchener Street)

If you would like to participate, please contact Ayan Dasvarma
